

MOZILLA 1.4 INFORMATION

INSTALLATION INSTRUCTIONS

Download software and user guides from:
<http://www.lbl.gov/download>

LIST OF STEPS: (ABBREVIATED)

1. Download Mozilla install software.
2. Download installation user's guide.
3. Install Mozilla Web browser and mail client software.
4. Configure email client.
5. Import your Netscape local mail, bookmarks, personal address book, and personal dictionary.
6. Download and install Oracle Calendar.
7. Configure your mail filters.

CONFIGURATION DATA

Incoming (IMAP4.lbl.gov) and outgoing (SMTP.lbl.gov) mail servers

LBNL LDAP directory services; detailed information can be found on the FAQ link.

Set SSL for IMAP server, port 993.

Preference configuration settings can be found in two locations: In the Web browser (Edit / Preferences...) and in the mail client (Edit / Mail & Newsgroup Account settings...).

MESSENGER EXPRESS (WEBMAIL)

<http://www.lbl.gov/mail>

KEY FEATURES

Available at home and on travel

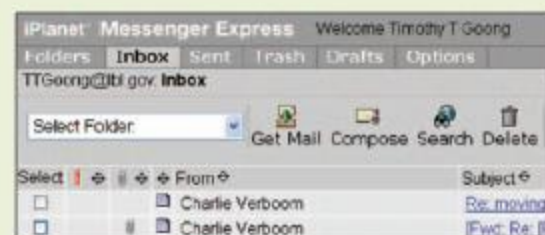

FIG. 5: Portion of the Messenger Express Inbox screen

Allows you to set vacation messages

Ability to change font size for message display

Works with most major Web browsers

Platform independent

Vacation Message
Use this form to set up automatic replies for people who read your email.

☐ Enable automatic vacation reply.

Start vacation notice on: (mm/dd/yyyy)

Stop vacation notice on: (mm/dd/yyyy)

Number of days between replies to repeat send:

Subject:

The following text will be included in your vacation messages:

Moving to Mozilla 1.4

The new standard
Email and Web browser
for the Laboratory

MOVING TO MOZILLA 1.4

SETTING A NEW LAB STANDARD EMAIL AND WEB BROWSER

WHY MOZILLA?

If you're a user of Netscape 4.75, the Lab's standard email client and Web browser, you've probably noticed increasing problems in accessing Web sites. In addition to these problems, the software is no longer supported by Netscape. So the Information Technologies and Services Division (ITSD) has researched a number of possible replacements. A key consideration was finding an application that works on Windows, Mac, and UNIX/Linux systems. After extensive testing, ITSD decided to adopt Mozilla 1.4 as the new standard email and browser application for LBNL.

PHASED IMPLEMENTATION STRATEGY

Moving all Lab users of Netscape over to Mozilla at once would impose a huge burden on computer support staff. To deploy Mozilla at the minimum overall cost, a phased approach has been developed. The transition has already started, with all new standard desktop computers arriving at the Lab being loaded with Mozilla instead of Netscape.

Longer term, the first significant deployment will be done with groups at the Lab who have contracted with ITSD for matrixed computer support. This will start during the Fall of 2003. The second Phase will be coordinated by ASD and involves divisions (or groups within divisions) that have internal technical support. By working with our business partners to coordinate the start date of different groups at the Lab, we hope to "meter" the flow of support requests to the ITSD support staff at a level that is sustainable without adding additional staff.

Our goal is to have all Netscape users moved over to Mozilla by September 2004, at which time we will no longer support Netscape 4.75.

WEB BROWSER FEATURES

Improved security

Multiple window tabbed browsing: Open multiple Web pages in a single window. Each page has an individual tab accessible from a Tab Bar.

More Websites supported by Mozilla 1.4 than Netscape 4.75

Cross-platform solution (Windows, MACs, Linux, Unix)

Downloadable themes to customize your Mozilla browser

Image blocking: Greater control over image downloads and animated image looping

Pop-up blocking: You can choose to allow pop-ups on specific Websites while blocking all others

FIG 2: Portion of the mail client screen with "Label" marked email

MAIL CLIENT FEATURES

WHAT'S NEW

Improved stability

Labels: Help you organize and prioritize your messages. You can customize the text and color on the five labels. Mail filters can be setup to use a label automatically.

Spell check: Scans the entire email for misspellings, including inline messages.

Display your email counter for each folder: unread and total emails, and storage size.

Junk mail manager: Flexible controls that allow personalized filtering. The user will need to train the "Junk mail" to recognize unwanted mail. This feature supplements LBNL Brightmail product.

New default configuration implementing SSL encryption for authentication

Selectable mail query interval

Searching: Quick flexible searches available from the new search bar

FIG 4: Portion of the Mail Filter screen

FIG 3: Portion of the mail client screen with counter columns

Expanded mail filtering features-filter incoming mail or existing mail folders

WHAT'S THE SAME

Appearance and features very similar to Netscape.

WHAT'S DIFFERENT

Vacation message: Use Messenger Express (Webmail), choose Options, then Vacation Message at: <http://www.lbl.gov/mail>

To service your LDAP password, use the LDAP change form website at: <https://www.lbl.gov/ldappw/>

We have separated the Calendar client from the mail client. Download the Oracle Calendar client software from: <http://www.lbl.gov/download>

To cut/paste images directly into email, cut the image and paste into a word processor, then copy/paste the image into your email.

Personal Address Book import as a new address book folder; address lists are still attached.
